

Directions For Rethreading The Line

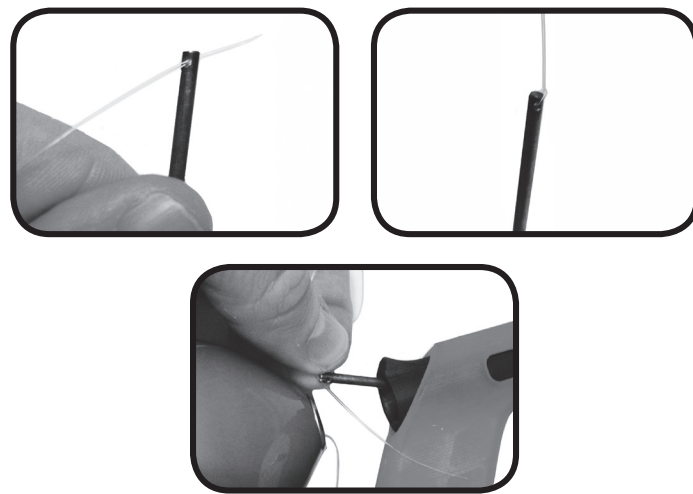

- 1.** Gently push in the two side buttons on the plastic plunger and slide the plunger forward.

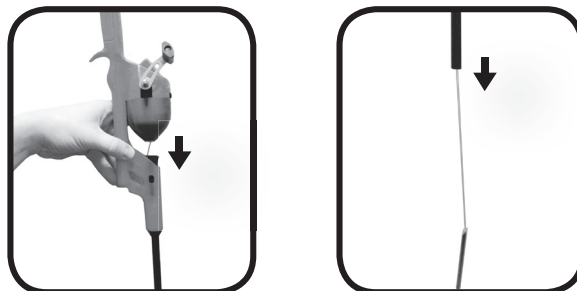

- 2.** Unscrew the hidden compartment cap that is located below the base of the rod shaft and remove 1 of the threading weights.

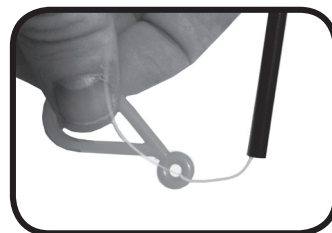

- 3.** Tie the line to the threading weight and insert the threading weight through the base of the plunger.

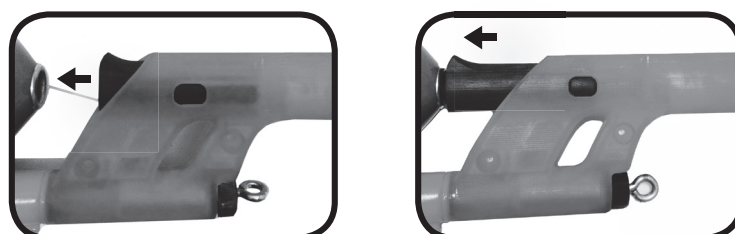

- 4.** Tilt the tip of the rod shaft downwards towards the ground. Pull additional line from the reel and allow the weight to travel through the rod shaft. A little shake of the fishing pole will help.

- 5.** Remove the weight from the tip of the rod shaft and tie your snap swivel, lure, hook, or plastic hook to the line. Be sure to put the threading weight back into the hidden compartment and then screw on the cap.

- 6.** Pull the plunger back towards the reel opening until the two side buttons on the plunger lock back in place.

**1 to 2 minutes for rethreading
the line...for hours of
Tangle-Free easy fishing...
Well Worth It!**
